Contents

1	Probability, Random Variables and Expectations	1
1.1	Axiomatic Probability	1
1.2	Univariate Random Variables	8
1.3	Multivariate Random Variables	22
1.4	Expectations and Moments	36
2	Estimation, Inference, and Hypothesis Testing	63
2.1	Estimation	64
2.2	Convergence and Limits for Random Variables	74
2.3	Properties of Estimators	78
2.4	Distribution Theory	86
2.5	Hypothesis Testing	103
2.6	The Bootstrap and Monte Carlo	117
2.7	Inference on Financial Data	121
3	Analysis of Cross-Sectional Data	141
3.1	Model Description	141
3.2	Functional Form	145
3.3	Estimation	148
3.4	Assessing Fit	151
3.5	Assumptions	155
3.6	Small Sample Properties of OLS estimators	158
3.7	Maximum Likelihood	159
3.8	Small Sample Hypothesis Testing	161
3.9	Large Sample Assumption	178
3.10	Large Sample Properties	180
3.11	Large Sample Hypothesis Testing	181
3.12	Violations of the Large Sample Assumptions	187
3.13	Model Selection and Specification Checking	200
3.14	Projection	218

3.A	Selected Proofs	221
4	Analysis of a Single Time Series	233
4.1	Stochastic Processes	233
4.2	Stationarity, Ergodicity, and the Information Set	234
4.3	ARMA Models	236
4.4	Difference Equations	245
4.5	Data and Initial Estimates	253
4.6	Autocorrelations and Partial Autocorrelations	254
4.7	Estimation	266
4.8	Inference	269
4.9	Forecasting	271
4.10	Nonstationary Time Series	276
4.11	Nonlinear Models for Time-Series Analysis	288
4.12	Filters	289
4.A	Computing Autocovariance and Autocorrelations	303
5	Analysis of Multiple Time Series	331
5.1	Vector Autoregressions	331
5.2	Companion Form	337
5.3	Empirical Examples	338
5.4	VAR forecasting	341
5.5	Estimation and Identification	343
5.6	Granger causality	346
5.7	Impulse Response Function	348
5.8	Cointegration	353
5.9	Cross-sectional Regression with Time-series Data	369
5.A	Cointegration in a trivariate VAR	376
6	Generalized Method Of Moments (GMM)	387
6.1	Classical Method of Moments	387
6.2	Examples	388
6.3	General Specification	392
6.4	Estimation	396
6.5	Asymptotic Properties	402
6.6	Covariance Estimation	405
6.7	Special Cases of GMM	410
6.8	Diagnostics	415
6.9	Parameter Inference	417
6.10	Two-Stage Estimation	420
6.11	Weak Identification	423

6.12	Considerations for using GMM	424
7	Univariate Volatility Modeling	427
7.1	Why does volatility change?	427
7.2	ARCH Models	429
7.3	Forecasting Volatility	461
7.4	Realized Variance	465
7.5	Implied Volatility and VIX	475
7.A	Kurtosis of an ARCH(1)	481
7.B	Kurtosis of a GARCH(1,1)	482
8	Value-at-Risk, Expected Shortfall and Density Forecasting	493
8.1	Defining Risk	493
8.2	Value-at-Risk (VaR)	494
8.3	Expected Shortfall	511
8.4	Density Forecasting	512
8.5	Coherent Risk Measures	522
9	Multivariate Volatility, Dependence and Copulas	531
9.1	Introduction	531
9.2	Preliminaries	532
9.3	Simple Models of Multivariate Volatility	535
9.4	Multivariate ARCH Models	544
9.5	Realized Covariance	557
9.6	Measuring Dependence	564
9.7	Copulas	572
9.A	Bootstrap Standard Errors	585

List of Figures

1.1	Set Operations	3
1.2	Bernoulli Random Variables	9
1.3	Normal pdf and cdf	13
1.4	Poisson and χ^2 distributions	16
1.5	Bernoulli Random Variables	18
1.6	Joint and Conditional Distributions	29
1.7	Joint distribution of the FTSE 100 and S&P 500	34
1.8	Simulation and Numerical Integration	38
1.9	Modes	43
2.1	Convergence in Distribution	75
2.2	Consistency and Central Limits	82
2.3	Central Limit Approximations	84
2.4	Data Generating Process and Asymptotic Covariance of Estimators	99
2.5	Power	108
2.6	Standard Normal cdf and Empirical cdf	118
2.7	CRSP Value Weighted Market (VWM) Excess Returns	125
3.1	Rejection regions of a t_{10}	165
3.2	Bivariate F distributions	167
3.3	Rejection region of a $F_{5,30}$ distribution	170
3.4	Location of the three test statistic statistics	178
3.5	Effect of correlation on the variance of $\hat{\beta}^{IV}$	194
3.6	Gains of using GLS	200
3.7	Neglected Nonlinearity and Residual Plots	207
3.8	Rolling Parameter Estimates in the 4-Factor Model	210
3.9	Recursive Parameter Estimates in the 4-Factor Model	211
3.10	Influential Observations	213
3.11	Correct and Incorrect use of “Robust” Estimators	217
3.12	Weights of an S&P 500 Tracking Portfolio	220

4.1	Dynamics of linear difference equations	252
4.2	Stationarity of an AR(2)	254
4.3	VWM and Default Spread	255
4.4	ACF and PACF for ARMA Processes	259
4.5	ACF and PACF for ARMA Processes	260
4.6	Autocorrelations and Partial Autocorrelations for the VWM and the Default Spread	264
4.7	M1, M1 growth, and the ACF and PACF of M1 growth	278
4.8	Time Trend Models of GDP	281
4.9	Unit Root Analysis of $\ln CPI$ and the Default Spread	288
4.10	Ideal Filters	291
4.11	Actual Filters	294
4.12	Cyclical Component of U.S. Real GDP	298
4.13	Markov Switching Processes	302
4.14	Self Exciting Threshold Autoregression Processes	304
4.15	Exercise 4.9	325
4.16	Plots for question 2(b).	329
5.1	Comparing forecasts from a VAR(1) and an AR(1)	342
5.2	ACF and CCF	344
5.3	Impulse Response Functions	351
5.4	Cointegration	355
5.5	Detrended CAY Residuals	368
5.6	Impulse Response of Level-Slope-Curvature	383
6.1	2-Step GMM Objective Function Surface	401
7.1	Returns of the S&P 500 and WTI	434
7.2	Squared returns of the S&P 500 and WTI	436
7.3	Absolute returns of the S&P 500 and WTI	443
7.4	News impact curves	446
7.5	Various estimated densities for the S&P 500	455
7.6	Effect of distribution on volatility estimates	457
7.7	ACF and PACF of S&P 500 squared returns	459
7.8	ACF and PACF of WTI squared returns	460
7.9	Realized Variance and sampling frequency	470
7.10	RV^{AC1} and sampling frequency	471
7.11	Volatility Signature Plot for SPDR RV	473
7.12	Black-Scholes Implied Volatility	476
7.13	VIX and alternative measures of volatility	480
8.1	Graphical representation of Value-at-Risk	495
8.2	Estimated % VaR for the S&P 500	502

8.3	S&P 500 Returns and a Parametric Density	507
8.4	Empirical and Smoothed empirical CDF	515
8.5	Naïve and Correct Density Forecasts	517
8.6	Fan plot	518
8.7	QQ plot	519
8.8	Kolmogorov-Smirnov plot	521
8.9	Returns, Historical Simulation VaR and Normal GARCH VaR.	528
9.1	Lag weights in RiskMetrics methodologies	537
9.2	Rolling Window Correlation Measures	545
9.3	Observable and Principal Component Correlation Measures	546
9.4	Volatility from Multivariate Models	557
9.5	Small Cap - Large Cap Correlation	558
9.6	Small Cap - Long Government Bond Correlation	559
9.7	Large Cap - Bond Correlation	560
9.8	Symmetric and Asymmetric Dependence	566
9.9	Rolling Dependence Measures	568
9.10	Exceedance Correlation	569
9.11	Copula Distributions and Densities	581
9.12	Copula Densities with Standard Normal Margins	582
9.13	S&P 500 - FTSE 100 Diagnostics	586
9.14	S&P 500 and FTSE 100 Exceedance Correlations	591

List of Tables

1.1	Monte Carlo and Numerical Integration	61
2.1	Parameter Values of Mixed Normals	98
2.2	Outcome matrix for a hypothesis test	105
2.3	Inference on the Market Premium	124
2.4	Inference on the Market Premium	124
2.5	Comparing the Variance of the NASDAQ and S&P 100	126
2.6	Comparing the Variance of the NASDAQ and S&P 100	128
2.7	Wald, LR and LM Tests	135
3.1	Fama-French Data Description	144
3.2	Descriptive Statistics of the Fama-French Data Set	145
3.3	Regression Coefficient on the Fama-French Data Set	151
3.4	Centered and Uncentered R^2 and \bar{R}^2	155
3.5	Centered and Uncentered R^2 and \bar{R}^2 with Regressor Changes	156
3.6	t -stats for the Big-High Portfolio	171
3.7	Likelihood Ratio Tests on the Big-High Portfolio	174
3.8	Comparison of Small- and Large- Sample t -Statistics	187
3.9	Comparison of Small- and Large- Sample Wald, LR and LM Statistic	188
3.10	OLS and GLS Parameter Estimates and t -stats	201
4.1	Estimates from Time-Series Models	254
4.2	ACF and PACF for ARMA processes	258
4.3	Seasonal Model Estimates	279
4.4	Unit Root Analysis of $\ln CPI$	287
5.1	Parameter estimates from Campbell's VAR	340
5.2	AIC and SBIC in Campbell's VAR	346
5.3	Granger Causality	348
5.4	Johansen Methodology	365
5.5	Unit Root Tests	367

6.1	Parameter Estimates from a Consumption-Based Asset Pricing Model	400
6.2	Stochastic Volatility Model Parameter Estimates	402
6.3	Effect of Covariance Estimator on GMM Estimates	409
6.4	Stochastic Volatility Model Monte Carlo	411
6.5	Tests of a Linear Factor Model	417
6.6	Fama-MacBeth Inference	422
7.1	Summary statistics for the S&P 500 and WTI	441
7.2	Parameter estimates from ARCH-family models	442
7.3	Bollerslev-Wooldridge Covariance estimates	451
7.4	GARCH-in-mean estimates	454
7.5	Model selection for the S&P 500	458
7.6	Model selection for WTI	461
8.1	Estimated model parameters and quantiles	503
8.2	Unconditional VaR of the S&P 500	506
9.1	Principal Component Analysis of the S&P 500	541
9.2	Correlation Measures for the S&P 500	544
9.3	CCC GARCH Correlation	555
9.4	Multivariate GARCH Model Estimates	556
9.5	Refresh-time sampling	563
9.6	Dependence Measures for Weekly FTSE and S&P 500 Returns	568
9.7	Copula Tail Dependence	579
9.8	Unconditional Copula Estimates	584
9.9	Conditional Copula Estimates	585
