# Contents

<b>1</b>	<b>Probability, Random Variables and Expectations</b>	<b>1</b>
1.1	Axiomatic Probability . . . . .	1
1.2	Univariate Random Variables . . . . .	8
1.3	Multivariate Random Variables . . . . .	22
1.4	Expectations and Moments . . . . .	35
<b>2</b>	<b>Estimation, Inference, and Hypothesis Testing</b>	<b>61</b>
2.1	Estimation . . . . .	61
2.2	Convergence and Limits for Random Variables . . . . .	72
2.3	Properties of Estimators . . . . .	76
2.4	Distribution Theory . . . . .	83
2.5	Hypothesis Testing . . . . .	100
2.6	The Bootstrap and Monte Carlo . . . . .	114
2.7	Inference on Financial Data . . . . .	118
<b>3</b>	<b>Analysis of Cross-Sectional Data</b>	<b>137</b>
3.1	Model Description . . . . .	137
3.2	Functional Form . . . . .	141
3.3	Estimation . . . . .	144
3.4	Assessing Fit . . . . .	147
3.5	Assumptions . . . . .	151
3.6	Small Sample Properties of OLS estimators . . . . .	153
3.7	Maximum Likelihood . . . . .	155
3.8	Small Sample Hypothesis Testing . . . . .	157
3.9	Large Sample Assumption . . . . .	173
3.10	Large Sample Properties . . . . .	175
3.11	Large Sample Hypothesis Testing . . . . .	177
3.12	Violations of the Large Sample Assumptions . . . . .	182
3.13	Model Selection and Specification Checking . . . . .	196

3.14	Projection . . . . .	213
3.A	Selected Proofs . . . . .	216
<b>4</b>	<b>Analysis of a Single Time Series</b>	<b>227</b>
4.1	Stochastic Processes . . . . .	227
4.2	Stationarity, Ergodicity, and the Information Set . . . . .	228
4.3	ARMA Models . . . . .	230
4.4	Difference Equations . . . . .	239
4.5	Data and Initial Estimates . . . . .	247
4.6	Autocorrelations and Partial Autocorrelations . . . . .	247
4.7	Estimation . . . . .	260
4.8	Inference . . . . .	263
4.9	Forecasting . . . . .	264
4.10	Nonstationary Time Series . . . . .	270
4.11	Nonlinear Models for Time-Series Analysis . . . . .	282
4.12	Filters . . . . .	282
4.A	Computing Autocovariance and Autocorrelations . . . . .	297
<b>5</b>	<b>Analysis of Multiple Time Series</b>	<b>323</b>
5.1	Vector Autoregressions . . . . .	323
5.2	Companion Form . . . . .	329
5.3	Empirical Examples . . . . .	330
5.4	VAR forecasting . . . . .	333
5.5	Estimation and Identification . . . . .	334
5.6	Granger causality . . . . .	338
5.7	Impulse Response Function . . . . .	340
5.8	Cointegration . . . . .	345
5.9	Cross-sectional Regression with Time-series Data . . . . .	361
5.A	Cointegration in a trivariate VAR . . . . .	367
<b>6</b>	<b>Generalized Method Of Moments (GMM)</b>	<b>379</b>
6.1	Classical Method of Moments . . . . .	379
6.2	Examples . . . . .	380
6.3	General Specification . . . . .	384
6.4	Estimation . . . . .	388
6.5	Asymptotic Properties . . . . .	392
6.6	Covariance Estimation . . . . .	397
6.7	Special Cases of GMM . . . . .	401
6.8	Diagnostics . . . . .	406

6.9	Parameter Inference . . . . .	408
6.10	Two-Stage Estimation . . . . .	411
6.11	Weak Identification . . . . .	414
6.12	Considerations for using GMM . . . . .	415
<b>7</b>	<b>Univariate Volatility Modeling</b>	<b>417</b>
7.1	Why does volatility change? . . . . .	417
7.2	ARCH Models . . . . .	419
7.3	Forecasting Volatility . . . . .	451
7.4	Realized Variance . . . . .	455
7.5	Implied Volatility and VIX . . . . .	464
7.A	Kurtosis of an ARCH(1) . . . . .	471
7.B	Kurtosis of a GARCH(1,1) . . . . .	472
<b>8</b>	<b>Value-at-Risk, Expected Shortfall and Density Forecasting</b>	<b>483</b>
8.1	Defining Risk . . . . .	483
8.2	Value-at-Risk (VaR) . . . . .	484
8.3	Expected Shortfall . . . . .	500
8.4	Density Forecasting . . . . .	502
8.5	Coherent Risk Measures . . . . .	512
<b>9</b>	<b>Multivariate Volatility, Dependence and Copulas</b>	<b>521</b>
9.1	Introduction . . . . .	521
9.2	Preliminaries . . . . .	522
9.3	Simple Models of Multivariate Volatility . . . . .	525
9.4	Multivariate ARCH Models . . . . .	534
9.5	Realized Covariance . . . . .	546
9.6	Measuring Dependence . . . . .	553
9.7	Copulas . . . . .	561
9.A	Bootstrap Standard Errors . . . . .	575

# List of Figures

1.1	Set Operations . . . . .	3
1.2	Bernoulli Random Variables . . . . .	9
1.3	Normal pdf and cdf . . . . .	13
1.4	Poisson and $\chi^2$ distributions . . . . .	15
1.5	Bernoulli Random Variables . . . . .	18
1.6	Joint and Conditional Distributions . . . . .	29
1.7	Joint distribution of the FTSE 100 and S&P 500 . . . . .	33
1.8	Simulation and Numerical Integration . . . . .	37
1.9	Modes . . . . .	43
2.1	Convergence in Distribution . . . . .	73
2.2	Consistency and Central Limits . . . . .	80
2.3	Central Limit Approximations . . . . .	81
2.4	Data Generating Process and Asymptotic Covariance of Estimators . . . . .	96
2.5	Power . . . . .	105
2.6	Standard Normal cdf and Empirical cdf . . . . .	115
2.7	CRSP Value Weighted Market (VWM) Excess Returns . . . . .	122
3.1	Rejection regions of a $t_{10}$ . . . . .	161
3.2	Bivariate $F$ distributions . . . . .	163
3.3	Rejection region of a $F_{5,30}$ distribution . . . . .	165
3.4	Location of the three test statistic statistics . . . . .	174
3.5	Effect of correlation on the variance of $\hat{\beta}^{IV}$ . . . . .	190
3.6	Gains of using GLS . . . . .	195
3.7	Neglected Nonlinearity and Residual Plots . . . . .	202
3.8	Rolling Parameter Estimates in the 4-Factor Model . . . . .	205
3.9	Recursive Parameter Estimates in the 4-Factor Model . . . . .	206
3.10	Influential Observations . . . . .	208
3.11	Correct and Incorrect use of “Robust” Estimators . . . . .	212
3.12	Weights of an S&P 500 Tracking Portfolio . . . . .	215
4.1	Dynamics of linear difference equations . . . . .	245
4.2	Stationarity of an AR(2) . . . . .	248

4.3	VWM and Default Spread . . . . .	249
4.4	ACF and PACF for ARMA Processes . . . . .	253
4.5	ACF and PACF for ARMA Processes . . . . .	254
4.6	Autocorrelations and Partial Autocorrelations for the VWM and the Default Spread . . . . .	258
4.7	M1, M1 growth, and the ACF and PACF of M1 growth . . . . .	272
4.8	Time Trend Models of GDP . . . . .	274
4.9	Unit Root Analysis of $\ln CPI$ and the Default Spread . . . . .	281
4.10	Ideal Filters . . . . .	284
4.11	Actual Filters . . . . .	288
4.12	Cyclical Component of U.S. Real GDP . . . . .	291
4.13	Markov Switching Processes . . . . .	295
4.14	Self Exciting Threshold Autoregression Processes . . . . .	297
4.15	Exercise 4.9 . . . . .	317
4.16	Plots for question 2(b). . . . .	322
5.1	Comparing forecasts from a VAR(1) and an AR(1) . . . . .	334
5.2	ACF and CCF . . . . .	336
5.3	Impulse Response Functions . . . . .	343
5.4	Cointegration . . . . .	347
5.5	Detrended CAY Residuals . . . . .	360
5.6	Impulse Response of Level-Slope-Curvature . . . . .	374
6.1	2-Step GMM Objective Function Surface . . . . .	393
7.1	Returns of the S&P 500 and WTI . . . . .	424
7.2	Squared returns of the S&P 500 and WTI . . . . .	426
7.3	Absolute returns of the S&P 500 and WTI . . . . .	433
7.4	News impact curves . . . . .	436
7.5	Various estimated densities for the S&P 500 . . . . .	446
7.6	Effect of distribution on volatility estimates . . . . .	447
7.7	ACF and PACF of S&P 500 squared returns . . . . .	449
7.8	ACF and PACF of WTI squared returns . . . . .	450
7.9	Realized Variance and sampling frequency . . . . .	460
7.10	$RV^{AC1}$ and sampling frequency . . . . .	461
7.11	Volatility Signature Plot for SPDR $RV$ . . . . .	463
7.12	Black-Scholes Implied Volatility . . . . .	466
7.13	VIX and alternative measures of volatility . . . . .	470
8.1	Graphical representation of Value-at-Risk . . . . .	485
8.2	Estimated % VaR for the S&P 500 . . . . .	492
8.3	S&P 500 Returns and a Parametric Density . . . . .	496
8.4	Empirical and Smoothed empirical CDF . . . . .	505

---

8.5	Naïve and Correct Density Forecasts . . . . .	506
8.6	Fan plot . . . . .	507
8.7	QQ plot . . . . .	508
8.8	Kolmogorov-Smirnov plot . . . . .	510
8.9	Returns, Historical Simulation VaR and Normal GARCH VaR. . . . .	517
9.1	Lag weights in RiskMetrics methodologies . . . . .	527
9.2	Rolling Window Correlation Measures . . . . .	534
9.3	Observable and Principal Component Correlation Measures . . . . .	535
9.4	Volatility from Multivariate Models . . . . .	546
9.5	Small Cap - Large Cap Correlation . . . . .	547
9.6	Small Cap - Long Government Bond Correlation . . . . .	548
9.7	Large Cap - Bond Correlation . . . . .	549
9.8	Symmetric and Asymmetric Dependence . . . . .	555
9.9	Rolling Dependence Measures . . . . .	557
9.10	Exceedance Correlation . . . . .	558
9.11	Copula Distributions and Densities . . . . .	569
9.12	Copula Densities with Standard Normal Margins . . . . .	570
9.13	S&P 500 - FTSE 100 Diagnostics . . . . .	574
9.14	S&P 500 and FTSE 100 Exceedance Correlations . . . . .	579

# List of Tables

1.1	Monte Carlo and Numerical Integration . . . . .	60
2.1	Parameter Values of Mixed Normals . . . . .	95
2.2	Outcome matrix for a hypothesis test . . . . .	103
2.3	Inference on the Market Premium . . . . .	121
2.4	Inference on the Market Premium . . . . .	121
2.5	Comparing the Variance of the NASDAQ and S&P 100 . . . . .	123
2.6	Comparing the Variance of the NASDAQ and S&P 100 . . . . .	125
2.7	Wald, LR and LM Tests . . . . .	131
3.1	Fama-French Data Description . . . . .	140
3.2	Descriptive Statistics of the Fama-French Data Set . . . . .	141
3.3	Regression Coefficient on the Fama-French Data Set . . . . .	147
3.4	Centered and Uncentered $R^2$ and $\bar{R}^2$ . . . . .	151
3.5	Centered and Uncentered $R^2$ and $\bar{R}^2$ with Regressor Changes . . . . .	152
3.6	$t$ -stats for the Big-High Portfolio . . . . .	167
3.7	Likelihood Ratio Tests on the Big-High Portfolio . . . . .	170
3.8	Comparison of Small- and Large- Sample $t$ -Statistics . . . . .	183
3.9	Comparison of Small- and Large- Sample Wald, LR and LM Statistic . . . . .	184
3.10	OLS and GLS Parameter Estimates and $t$ -stats . . . . .	196
4.1	Estimates from Time-Series Models . . . . .	248
4.2	ACF and PACF for ARMA processes . . . . .	252
4.3	Seasonal Model Estimates . . . . .	273
4.4	Unit Root Analysis of $\ln CPI$ . . . . .	281
5.1	Parameter estimates from Campbell's VAR . . . . .	332
5.2	AIC and SBIC in Campbell's VAR . . . . .	338
5.3	Granger Causality . . . . .	340
5.4	Johansen Methodology . . . . .	357
5.5	Unit Root Tests . . . . .	359
6.1	Parameter Estimates from a Consumption-Based Asset Pricing Model . . . . .	392

---

6.2	Stochastic Volatility Model Parameter Estimates . . . . .	394
6.3	Effect of Covariance Estimator on GMM Estimates . . . . .	401
6.4	Stochastic Volatility Model Monte Carlo . . . . .	402
6.5	Tests of a Linear Factor Model . . . . .	408
6.6	Fama-MacBeth Inference . . . . .	413
7.1	Summary statistics for the S&P 500 and WTI . . . . .	431
7.2	Parameter estimates from ARCH-family models . . . . .	432
7.3	Bollerslev-Wooldridge Covariance estimates . . . . .	441
7.4	GARCH-in-mean estimates . . . . .	444
7.5	Model selection for the S&P 500 . . . . .	448
7.6	Model selection for WTI . . . . .	451
8.1	Estimated model parameters and quantiles . . . . .	493
8.2	Unconditional VaR of the S&P 500 . . . . .	496
9.1	Principal Component Analysis of the S&P 500 . . . . .	530
9.2	Correlation Measures for the S&P 500 . . . . .	534
9.3	CCC GARCH Correlation . . . . .	544
9.4	Multivariate GARCH Model Estimates . . . . .	545
9.5	Refresh-time sampling . . . . .	552
9.6	Dependence Measures for Weekly FTSE and S&P 500 Returns . . . . .	557
9.7	Copula Tail Dependence . . . . .	568
9.8	Unconditional Copula Estimates . . . . .	573
9.9	Conditional Copula Estimates . . . . .	573
